

Products & Services

■ PSTN Services

Originate and terminate calls throughout our footprint from a single Pac-West connection

■ Local Origination / Dial Access

Local access numbers available in an extensive number of rate centers

■ Managed Modem Service

Fully managed, scalable dial-up data services

■ Carrier Class Co-Location Facilities

Leverage our secure and conditioned facilities, and connect directly to the Pac-West network

■ Intelligent Foreign Exchange (IFEX)

Establish a local presence to terminate traffic economically

■ Toll-Free Service

Offer your subscribers toll-free access to their service from anywhere in the United States

■ International Traffic

High-quality domestic termination with tailored rate plans for international carriers

Pac-West's Advanced Network

Pac-West's advanced network architecture provides you with access to more LATAs and rate centers across our footprint using fewer circuits than any other communications provider.

A Partner You Can Trust

Pac-West has built one of the most comprehensive and reliable networks, carrying over a billion minutes of voice and data traffic per month across our network. For over 28 years, countless customers have placed their trust and confidence in Pac-West to manage their communications network.

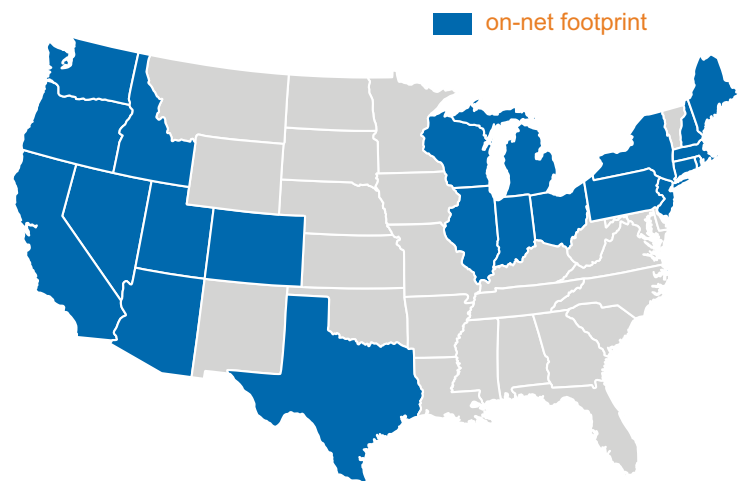

Our Unique Approach

Pac-West provides wholesale communication infrastructure services that enable traditional and next-generation carriers to efficiently deliver integrated communications solutions.

With a network that provides carriers access to over 40% of the US population, connecting to Pac-West will rapidly expand your local access coverage while significantly reducing your network equipment and operating costs, and improving your time to market. Pac-West's network is reliable, secure, and scalable and ready to grow your business.

Our network was specifically designed for ease of integration and connectivity for communications solutions. Whereas most networks were designed to support direct retail services, we built our network from its inception specifically to support our business as a "carrier's carrier".

Pac-West's carrier-class network and co-location facilities have passed a rigorous 210-point inspection and certification. Pac-West aggregates multiple rate centers across multiple LATAs into a single point of interconnection.

PSTN On Ramp

Pac-West's PSTN On Ramp Service enables you to rapidly expand into new markets without the time and expense of building your own network infrastructure. With our PSTN On Ramp, you can serve millions of end-users from a single Pac-West connection.

The PSTN On Ramp service includes call origination and termination (local, intrastate, interstate and toll-free), local access numbers (DIDs), two-way connectivity, and multi rate center / multi-LATA coverage. Pac-West's network supports multiple protocols, including SIP, SS7, PRI and H.323.

Features

- Serve an extensive number of rate centers from a single connection
- Provide local access numbers (DIDs) to your customers
- Reduce your costs by eliminating the need to locate equipment and establish trunks in multiple rate centers and LATAs

Local Origination / Dial Access

Pac-West has comprehensive local DID access coverage throughout its footprint, including nearly 100% of the AT&T and Verizon service areas in California. We also offer one of the deepest footprints on the west coast, with over over 600 rate centers in CA alone.

We aggregate incoming calls from multiple ratecenters across multiple LATAs. By co-locating your equipment with Pac-West, you can achieve networkwide coverage without having to locate equipment in every LATA, which means explosive growth for your business without explosive cost.

Managed Modem Service

Pac-West's Managed Modem service enables you to provide connectivity to your end-users without the capital expense of building and maintaining your own access network. Our advanced network enables you to rapidly expand your coverage, while at the same time reducing your overall costs. Our Managed Modem service supports V.92 enabling modem-on-hold, Quick Connect and V.44 compression.

Our Managed Modem solution includes Local Access Numbers, Internet Backbone connectivity, Modems, Proxy Authentication, Routers, Network Management, Local Dial Network, Call Detail and Usage Reports, DNS and Toll-Free Ring.

Co-location Facilities

Pac-West operates multiple carrier-grade co-location facilities in major markets. Providing a direct connection to Pac-West's extensive network footprint, our co-location provides state of the art security, power, connectivity and conditioning with the flexibility to meet your changing business needs.

Intelligent Foreign Exchange (IFEX)

Intelligent Foreign Exchange (IFEX) is designed for communications providers, such as calling card companies, IP-based service providers and other enhanced service providers looking to reach new markets.

IFEX enables you to terminate high volumes of voice traffic in Pac-West's footprint, by establishing a local presence in multiple foreign exchange areas and delivering calls from your customers to those exchanges.

Features

- Cost-effectively terminate voice traffic to local calling areas in an extensive number of ratecenters
- Reduce your costs by eliminating the need to purchase and maintain local facilities in multiple exchange areas
- Hand off your traffic at a single point to Pac-West via IP or TDM
- Reduce your operating costs, including traffic management/ administrative costs, by dynamically routing calls

Toll-Free Origination / Aggregation

Pac-West provides toll-free aggregators with connection to the PSTN throughout its footprint from a single connection to allow companies to offer toll-free service to its customers throughout the United States.

International Traffic

Pac-West offers International carriers attractive domestic routing packages that provide cost containment for US-bound traffic.

Our plans ensure that all completed calls fall below your set rate threshold, providing the best combination of cost and quality in the industry.
