

With **TELASTIC™ Virtual Machines** from Pac-West, telecom service providers can create new communications-ready server instances on the fly, provision phone numbers, and start routing traffic like never before, and can do it without capital investment.

Features:

Fully Automated Application Hosting

- Virtual or Physical Servers
- Integrated communications services
- Add capacity on demand

Integrated Telephony Services

- Get new phone numbers / DIDs
- Create routing groups
- Automated interconnection

Carrier-Grade Infrastructure

- Secure, Isolated Data and Servers
- Backup and data preservation
- SIP Load Balancing
- High Perf 10 Gb Switching

Benefits:

Pay ONLY for What You Use

- Expand existing services without capital investment.
- Launch new services with zero upfront costs.

Get New Services to Market FAST

- Enhance existing services in days not months.
- Offer new services priced for wholesale business applications.

Scale Quickly and Efficiently

- Never worry about over building or not enough resources.
- Meet growth, seasonal, or burst demand in zero time.

Quality and Reliability you can Trust

- Allows IT staff to focus on innovation not operations
- Maintain the quality your customers demand

Service Growth and the Vicious Cycle

Telecommunications service providers often struggle with a vicious cycle of capital availability and cash flow, efficient and timely delivery of services to their customer base, managing the quality of those to meet customer expectations, and the ongoing demand for creating a differentiated service set to help retain customers.

All too often, this means that service providers spend precious capital and untold resources on basic communications application infrastructure - server farms, routers, and monitoring systems, and more.

Introducing TELASTIC™

Telastic™ is Telecom On-Demand - delivering real-time telecom services with cloud scalability, pay-as-you-grow pricing, and flexible delivery options. Telastic™ products harness the power of cloud computing so you can unite disparate systems, rapidly grow your product line or efficiently scale your business. Telastic's carrier-grade building blocks include network components, operational systems, and white-label applications that can be delivered as fully-managed, self-managed or infrastructure application services.

TELASTIC™ Virtual Machines

Telastic provides a unique and dramatically powerful solution to enable your business to scale with an on-demand application capacity environment that lets you add communications-optimized servers, find and provision numbers, and scale your applications based on the needs of your business, not the limitations of your capital availability.

And Since your servers are interconnected with the Pac-West Telastic ecosystem, you have instant access to additional carrier infrastructure, applications, and partners.

Telastic literally enables you to provide communications services at the speed of need.

About Pac-West Telecomm, Inc.

For thirty years, Pac-West has provided communications infrastructure services that have enabled the world's best carriers and service providers to get a competitive edge and keep it. Our established origination and termination offerings combined with our groundbreaking Telastic™ on-demand services offer unparalleled reliability, security, and – most importantly – value.

Pac-West earns your business by empowering you with the services you need – fast. We keep your business by providing customer service that'll have you wondering why you ever trusted your business with anyone else.
